

ERNST & YOUNG
Quality In Everything We Do

Winner

High Damping Foam (HDF)

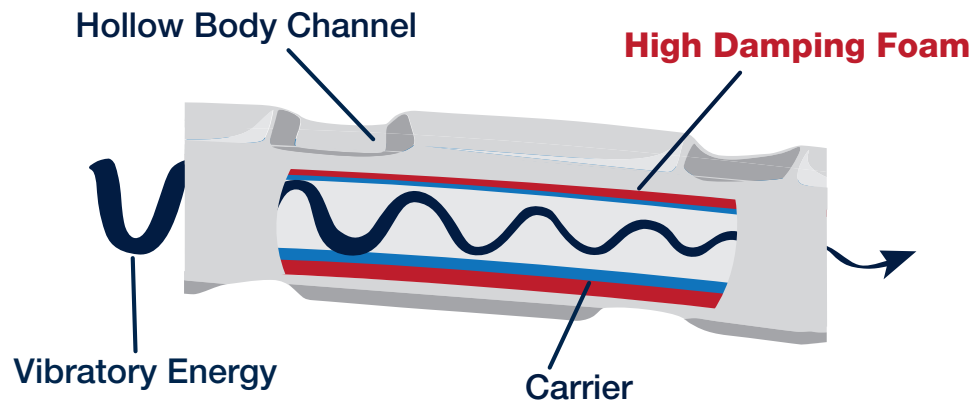

Features

- Novel treatment for structure-borne noise paths in body architecture
- Complexity reducing acoustical treatment for radiating structures such as door panels and roofs
- Compatible with today's assembly process
- FEA predictive performance validated through testing and analysis

Benefits

- NVH treatment option for noise path or receiver
- Overall improved acoustical comfort
- Performance reliability
- The right design and the right material for the right application
